FOX INSIGHT

Longitudinal Patient Reported Outcomes and Genetic Data

Fox Insight is an online, longitudinal health study of people with and without Parkinson’s disease. Fox Insight data is a rich data set facilitating discovery, validation, and reproducibility in Parkinson’s disease research. The dataset is generated through routine longitudinal assessments (health and medical questionnaires evaluated at regular cycles); one-time health and disease questionnaires about symptoms, daily activities, and other factors; and, in a subgroup of people with Parkinson’s disease, genetic data collection. Qualified researchers can explore, analyze, and download patient-reported outcomes (PROs) data and Parkinson’s disease-related genetic variants at <https://Fox.DEN.michaeljfox.org>. The full Fox Insight genetic data set, including approximately 650,000 single nucleotide polymorphisms (SNPs) per participant, can be requested separately with institutional review and is [described outside dictionary](#).

For more details on the background and the methods used in the development of the Fox Insight Study, please see the following article: <https://www.nature.com/articles/s41597-020-0401-2>

USING FOX INSIGHT DATA

Structure and Unique Identifier

The Fox Insight data tables are shared in **long format**: one row/observation contains information for *one questionnaire instance for one participant*. That means that each participant *may* have multiple rows in a table, if they took a Questionnaire multiple times on different dates. Each table contains all the responses for a given questionnaire.

Each table contains a **Unique Identifier** for participants, a **Temporal Variable** indicating the time of each Questionnaire event, and a set of **Variables**. We provide the definitions below.

Field	Name	Definition
Unique Identifier	fox_insight_id	String which contains the prefix 'FOX' and a unique number assigned to participants. Ex: 'FOX_000146'.
Temporal Variable	days_elapsed	For a given observation, the number of days that have elapsed since "Day 0" – a randomized reference date unique to each Fox Insight participant that is defined in relation to the participant's birthdate. This column can be used to determine the number of days between Questionnaire events.
Variables	Ex: AcuteHeart, MtrScrnRiseChair	Individual variable definitions are provided in this Data Dictionary by table. Most Variables are direct and raw responses from participants in

		the Questionnaires. Others are derived variables, which have undergone a transformation either to protect confidentiality or to render them usable for analysis. When this is the case, it is indicated in the data dictionary.

Determining PD Diagnosis Status and Disease Duration

The Fox Insight study includes data for both individuals who have been diagnosed with PD (PD cohort) and individuals who have *not* been diagnosed with PD (non-PD cohort). Since Fox Insight is a longitudinal observational study, an individual’s status may change over the duration of their participation. What follows is a description of the available variables in Fox Insight which can be used in determining PD diagnosis status at a given point in time.

Field	Table and Variable Name (Table: Variable Name)	Definition
Initial PD Diagnosis	Users: InitPDDiag	A variable indicating whether or not an individual had been diagnosed with PD by a physician or other health care professional <i>at the time of registration for the Fox Insight study</i> , i.e., <u>a participant’s baseline diagnosis status</u> .
Years with a diagnosis of PD when enrolled in Fox Insight	Users: YearsWithPD	For individuals reporting a baseline diagnosis of PD, the number of years since their initial diagnosis, <i>at the time of registration for the Fox Insight study</i> .
Current PD Diagnosis	General: CurrPDDiag	A variable indicating an individual’s <i>most recently reported PD diagnosis status</i> , derived from their responses at baseline and upon quarterly return visits, i.e., <u>a participant’s current diagnosis status</u> .
Change in PD Diagnosis	Return Questionnaire: PDChangePD [PD Cohort] Return Questionnaire (Control): NewPDDiagCTR [Non-PD Cohort]	[PD Cohort]: For individuals who have previously reported a diagnosis of PD, a variable indicating whether there has been a <i>change in their PD status</i> since their last Fox Insight visit. [Non-PD Cohort]: For individuals who had not previously reported a diagnosis of PD, a variable indicating whether there has been a <i>change in their PD status</i> since their last Fox Insight visit.

Please note, an individual’s current **CurrPDDiag** represents their most recently reported diagnosis status, which can change over time. To determine a participant’s PD diagnosis status at a specific point in time,

researchers should use a combination of the participant's *initial* PD diagnosis, adjusted for any reported *changes* in diagnosis, through the *days_elapsed* for the point in time of interest.

Fox Insight Core Questionnaires versus One-Time Questionnaires

Surveys presented to Fox Insight participants are broken down into two categories: (1) longitudinal Fox Insight Core Questionnaires, as described in the Fox Insight Schedule of Activities, and (2) cross-sectional one-time health and disease questionnaires about symptoms, daily activities, and other factors. Both core and one-time surveys can be presented to any of the following cohorts: PD, non-PD, or both.

The detailed Core Questionnaire Schedule of Activities can be [found in the resources section of FoxDEN](#). All Core questionnaires are asked on a recurring basis at the frequency described in the Schedule of Activities for as long as an individual continues their voluntary participation. Since participants' length of participation in the Fox Insight study varies, **the number of observations available for any repeated measures analysis will vary accordingly based on researchers' variable(s) of interest**. Since participants have a window of time to complete surveys within each visit described in the Schedule of Activities, researchers should pay close attention to the *days_elapsed* variable, to determine the actual length of time between responses to recurring surveys, as the exact interval between visits may vary by participant.

One-time surveys are instruments developed by internal or external researchers seeking to generate data to answer research questions that could otherwise not be fully explored with the existing questionnaires. These IRB-approved instruments undergo an internal scientific review process. They often are developed in conjunction with external researchers. Completed instruments are made available to participants for a limited period of time, typically spanning 3-6 months. An individual will only have one response to these questionnaires and participation in these ancillary questionnaires is independent of participation in the core longitudinal study questionnaires. Some one-time questionnaires may have additional inclusion/exclusion screening criteria, e.g., only persons with PD will be invited to respond. For these reasons, any individual one-time questionnaire will have been completed by only a subset of the total Fox Insight participant pool. Therefore, **the number of observations available for cross-sectional analyses using one-time survey data will be much smaller than the 50,000+ total Fox Insight participants**.

Demographics: About You and Users Table

If you require **demographics** and other **user-level** information for each participant, two tables are available in **FoxDen** and in the shared **Monthly Data Cuts** which you may find particularly helpful:

1. **About You** Table
2. **Users** Table [*Registration*]

These tables contain user-level variables which are often persistent over the length of participants' study duration, such as whether the participant has been diagnosed with PD, their sex assigned at birth, or their race/ethnicity. For a detailed description of the variables available in each table, please see the respective data dictionary sections. Combining the **About** Table or the **Users** Table with any other questionnaire will allow you to define cohorts based on demographics and other participant data available in those tables.

Combining Multiple Fox Insight Tables

The **Unique Identifier (fox_insight_id)** and **Temporal Variable (days_elapsed)** are the key variables that will enable you to combine and transform Fox Insight data to meet your research needs. If you are interested in conducting cross-sectional analyses (i.e., one record per participant), you can use the **fox_insight_id** to identify and combine all of the questionnaire responses for a single participant. Bear in mind, an individual may have multiple instances of any single questionnaire, so you may wish to consider whether you need data which was collected in a single “visit” window, or alternatively whether you wish to specify a specific time of responses (e.g., the *most recent* submission for each data point). Either approach can be accomplished by using the **days_elapsed**.

If you are conducting longitudinal analyses, you can use the **days_elapsed** variable to order repeated measures. **A larger value of days_elapsed for an observation indicates a more recent questionnaire response.** Since Fox Insight is a voluntary study, while participants were sent survey reminders at regular intervals, skipped visits are often encountered. The detailed Schedule of Activities [found in the resources section of FoxDEN](#). The Schedule of Activities can be used as a guide for defining a skipped visit for the purpose of your specific analysis, or you may wish to develop your own definition using **days_elapsed**.

Example of Fox Insight Data Transformation

The exact code/procedures used to transform Fox Insight data will depend on the software or language being used to analyze the data (e.g., SAS, Excel, R, Python). Below we give a general example for how to combine data from the **Brief Motor Screen** table with the **About You** table for a longitudinal analysis that requires demographic covariate information.

The following table shows the basic data structure for the **Brief Motor Screen** table, which contains the unique identifier **fox_insight_id**, the temporal variable **days_elapsed**, and variable of interest **MtrScrRiseChair** (*Do you have trouble rising from a chair?*).

Brief Motor Questionnaire		
fox_insight_id	days_elapsed	MtrScrRiseChair
FOX_001	22500	1
FOX_001	23000	0
FOX_005	24000	1
FOX_005	24500	1

The table below displays the data structure for the **About You** table, restricted to the variables “**Education,**” “**Sex,**” and “**Age.**” In this case, we wish to use only the most recent demographic data reported by a participant. Therefore, before combining the demographic data with our variable of interest, we would first filter the **About You** table to keep only the most *recent* questionnaire instance. In the example below, that would result in keeping only the records corresponding to **days_elapsed = 23000** for participant ‘FOX_001,’ and **days_elapsed = 24500** for participant ‘FOX_005’ (i.e., the maximum value of days_elapsed for each fox_insight_id).

About You				
fox_insight_id	days_elapsed	Education	Sex	Age
FOX_001	22500	7	1	61.6
FOX_001	23000	7	1	63
FOX_005	24000	5	2	65.7
FOX_005	24500	5	2	67

About You				
fox_insight_id	days_elapsed	Education	Sex	Age
FOX_001	23000	7	1	63
FOX_005	24500	5	2	67

Once a cross-section of the demographic values has been obtained, the table may be combined with the **Brief Motor Screen** in order to expand it with the required demographics by using the **fox_insight_id**. The table below shows what the result of this would look like.

Brief Motor Questionnaire (With Demographics)						
fox_insight_id	days_elapsed	MtrScrRiseChair	Education	Sex	Age	days_elapsed_B
FOX_001	22500	1	7	1	63	2300
FOX_001	23000	0	7	1	63	2300
FOX_005	24000	1	5	2	67	24500
FOX_005	24500	1	5	2	67	24500

Now, each row of the **Brief Motor Screen** data also includes the selected demographic covariates for the participant. Note that the merging procedure leaves us with **two temporal variables**: *days_elapsed* (corresponding to the **Brief Motor Screen**); and, *days_elapsed_B* (corresponding to the **About You** table). That is because the participant may have provided their most recent demographic data on a different date than their response for our variable of interest. This is common in Fox Insight, since different surveys have different response cadences. Keeping these two columns will allow you to keep track of the time at which each response was obtained in each questionnaire, if that is important to your analysis.

If you only require a cross-section of the data, then it will suffice to keep the most recent record for the variable of interest in the combined table for each participant, as the figure below shows.

Brief Motor Questionnaire (With Demographics)					
fox_insight_id	days_elapsed	MtrScrRiseChair	Education	Sex	Age
FOX_001	23000	0	7	1	63
FOX_005	24500	1	5	2	67

ABOUT

Table Description: About You

View Source Instrument: [\[link\]](#)

Details: This instrument is referred to as “About You (Profile)” in the Participant Schedule of Activities, and as “About You” in Fox DEN and the questionnaire forms. It is completed by all study participants at Registration, and presented in ‘summary mode’ on an annual basis thereafter. ‘Summary mode’ enables participants to make changes to their prior response, but does not require them to do so unless they have indicated a change.

Following an update in 12/2023, the question “What is your biological sex?” (variable ‘sex’ below) was discontinued and replaced with three new questions. In addition to querying participants about their sex at birth, the new question asked them about their gender identity and sexual orientation. Participants who had an open study visit at the time of this change were presented with the original question, but for all others (and for all subsequent study visits) the new version of this questionnaire is presented. Participants responding to the new version for the first time will have to complete the instrument from the beginning, and will not be presented the ‘summary mode’. Each subsequent assignment will revert back to being presented in the ‘summary mode’. Data collected for the original question is still retained in the data set.

Details: This variable is derived based on a participant’s response to the “Return Questionnaire,” which is referred to as “Return Visit Questionnaire (PD)” for participants with PD, and “Return Visit Questionnaire (Non-PD)” for participants without PD in the Schedule of Activities. Participants populate data for the variable “InitPDdiag” when completing the Registration Questionnaire at the beginning of their participation in the study, and then report on their current PD diagnosis when completing the Return Questionnaire at each study visit, resulting in the “CurrPDDiag” variable.

GENETIC

Table Description: FIGS Priority SNPs

View Source Instrument: Genetic Platform Annotations [\[link\]](#)

Details: The following 17 SNPs are collected in conjunction with the Fox Insight Genetic Sub-Study (FIGS), in partnership with 23andMe. Approximately 10,000 participants enrolled into this sub-study from 2017-2021. This genetic data is available to researchers with Tier 1 access to Fox Insight, with additional genetic data (for approximately 650,000 SNPs) available to researchers with Tier 2 access. To register for Tier 1 access [click here](#), to register for Tier 2 access [click here](#). Tier 2 data is provided in .BGEN format and can be transformed using QCTOOL: [link](#).

The genetic platform annotations linked above provide summary statistics for the full genetic data set. It includes tables that provide genotyping rates separated based on specific ancestry (as defined by participant’s 23andMe customer profile) and genotyping platform (which can be determined by the *platform_version* variable). For example, the genotyping rates for all participants genotyped on the V5 platform are separated into four files based on ancestry: African, Asian, European, Latinx. 23andMe ancestry classifier algorithm determines the ancestry for each participant for their Ancestry product experience ([link](#)). The other platforms (V3 and V4) also have the same four corresponding tables. These tables have four columns (as described in first table below) which indicate RSID, chromosome name, chromosomal position, and call rate respectively. For more information, please refer to the platform annotations above.

<i>Column Name</i>	<i>Definition</i>
rsid	dbSNP build 146 rsID when available; a small number of SNPs without good matches in dbSNP have 23andMe names like ‘i12345’
chrom	Chromosome name, NCBI Build 37
pos	Chromosomal position, NCBI Build 37
gt.rate	Rate of called (not NN) genotypes

HANDEDNESS (Hands)

Table Description: Handedness Questionnaire (Edinburgh Handedness short form)

View Source Instrument: [\[link\]](#)

Details: This instrument is referred to as 'Your Handedness' in Fox DEN, the questionnaire forms, and as 'Handedness Questionnaire' in the Participant Schedule of Activities. It is administered to participants one time, following the completion of registration. For analysis of the short form version completed by participants in Fox Insight (as compared to the previous iteration of this instrument), please see: [link](#). Both participants with and without a diagnosis of PD complete this questionnaire.

RETURNPD

Table Description: Return Visit Questionnaire (PD)

View Source Instrument: [\[link\]](#)

Details: Participants first complete this survey three months after Baseline and then every three months thereafter. The instrument is referred to as “Return Visit Questionnaire (PD)” in the Participant Schedule of Activities and in Fox DEN. To calculate disease duration for a given participant, researchers can determine a respondent’s age at diagnosis using the ‘InitPDDiagAge’ variable and compare this to the ‘Age’ variable contained in the ‘About’ table, which indicates a participant’s current age (rounded to one decimal place for confidentiality).

YearsWithPD	Numeric	Years with a diagnosis of Parkinson's disease when enrolled in Fox Insight [Derived]			0	Early (< 3 years)	This variable is derived by comparing an individual's reported age at the time of registration with their reported age at the time of PD diagnosis.
					1	Mid (3 - 10 years)	
					2	Later (11 - 50 years)	
					3	Out of range	

PD-PROP (Pdprop)

Table Description: What’s bothering you? Version 1.0 (PD Patient Reported Outcome of Problem/ PD-PROP)

View Source Instrument: [\[link\]](#)

Details: Participants first complete this instrument one month after Baseline and then every three months thereafter. The instrument is referred to as “What’s bothering you? (PD Patient Reported Outcome of Problem / PD-PROP)” in the Participant Schedule of Activities and as “What’s bothering you – Version 1.0” in Fox DEN. Participants responding to this instrument are asked to describe, in their own words, their five most bothersome problems due to PD, in order of first most bothersome to fifth most bothersome, and in what way this affects their everyday functioning. They are able to submit a response of ‘prefer not to respond’ to any of the questions. If responding, they provide free-text responses of up to 25 words, which are analyzed using Natural Language Processing (NLP; a machine learning technique) to extract clinically meaningful symptoms. Participants also rate the severity of each of their reported problems on a scale of 0-3, as described below.

PD-PROP 2.0 data – a new curation of the verbatim responses collected via the instrument – was released in July 2022. The new curation *supersedes* this original version by re-analyzing previously curated responses alongside new responses, using an expanded set of clinically meaningful symptoms and domains. The instrument itself remains unchanged. Investigators are strongly recommended to use that version of the data, unless they have an ongoing project that uses data from the previous curation. The 2.0 curation is available via Fox DEN and is referred to as “What’s bothering You – Reclassified Version 2.0.” For more information on the PD-PROP, please see [\[link\]](#), [\[link\]](#), [\[link\]](#), and [\[link\]](#).

To facilitate aggregate analysis, symptoms are grouped into overarching domains of similar symptoms. These domains are pre-coded into the curated dataset as an additional superset of variables for user convenience, as described in the detailed variable tables below. Each symptom is grouped into exactly one domain, but each domain contains multiple symptoms. Symptoms belonging to a domain group have a shared prefix attached to their corresponding variable names.

For each pair of combined free-text responses, multiple symptoms may be extracted by the NLP algorithm. Therefore, when reviewing instrument data, users may notice that multiple symptoms for a given study visit are listed as “first” most bothersome, “second” most bothersome, and so on. Integer suffix values in the variable names denote the “bothersome-ness” rank of the problem associated with the symptom/domain (e.g., a suffix of “_1” is first most bothersome, “_2” is second most bothersome).

The following table lists the clinically meaningful symptoms, their associated domains and variable prefix values appearing in the PD-PROP 1.0 curation:

Domain	Prefix	Symptom
Autonomic Dysfunction	PdpropAutDys	Bladder incontinence
		Bloating
		Bowel frequency
		Bowel obstruction
		Constipation
		Bowel incontinence
		Bowel pain
		Other
		Bowel urgency
		Excessive Sweating
		Frequent Urination
		Orthostatic Hypotension

Pain	PdpropPainPain	Painful dystonia
		Cramp
		Discomfort

Domain	Prefix	Symptom
		Pain
		Headache
Postural Instability	PdpropPostin	Balance
		Falling
		Freezing
		Gait disorder
		Posture
Rigidity	PdpropRig	Dystonia
		Stiffness
Sleep	PdpropSleep	Early Morning Awakening
		Excessive Sleepiness (ES)
		Parasomnia Unspecified
		RBD
		RLS
		Sleep Maintenance Insomnia
		Sleep onset insomnia
		Vivid Dreams
		Sleepiness unspecified
		Insomnia Unspecified
		Non-Restful Sleep
Tremor	PdpropTrem	Tremor
		Dexterity

PD-PROP 2.0 (Pdprop2)

Table Description: What’s bothering you? Reclassified Version 2.0 (PD Patient Reported Outcome of Problem/ PD-PROP)

View Source Instrument: [\[link\]](#)

Details: Participants first complete this instrument one month after Baseline and then every three months thereafter. The instrument is referred to as “What’s bothering you? (PD Patient Reported Outcome of Problem / PD-PROP)” in the Participant Schedule of Activities and as “What’s bothering you – Reclassified Version 2.0” in Fox DEN. Participants responding to this instrument are asked to describe, in their own words, their five most bothersome problems due to PD, in order of first most bothersome to fifth most bothersome, and in what way this affects their everyday functioning. They are able to submit a response of ‘prefer not to respond’ to any of the questions. If responding, they provide free-text responses of up to 25 words, which are analyzed using Natural Language Processing (NLP; a machine learning technique) to extract clinically meaningful symptoms. Participants also rate the severity of each of their reported problems on a scale of 0-3, as described below.

PD-PROP 2.0 data – a new curation of the verbatim responses collected via the instrument – was released in July 2022. This curation *supersedes* the original by re-analyzing previously curated responses alongside new responses, using an expanded set of clinically meaningful symptoms and domains. The instrument itself remains unchanged. Investigators are strongly recommended to use this version of the data, unless they have an ongoing project that uses data from the previous curation. The original 1.0 curation is available via Fox DEN for archival purposes and is referred to as “What’s bothering You – Version 1.0.” For more information on the PD-PROP, please see [\[link\]](#), [\[link\]](#), [\[link\]](#), and [\[link\]](#).

To facilitate aggregate analysis, symptoms are grouped into overarching domains of similar symptoms. These domains are pre-coded into the curated dataset as an additional superset of variables for user convenience, as described in the detailed variable tables below. Each symptom is grouped into exactly one domain, but each domain contains multiple symptoms. Symptoms belonging to a domain group have a shared prefix attached to their corresponding variable names¹.

For each pair of combined free-text responses, multiple symptoms may be extracted by the NLP algorithm. Therefore, when reviewing instrument data, users may notice that multiple symptoms for a given study visit are listed as “first” most bothersome, “second” most bothersome, and so on. Integer suffix values in the variable names denote the “bothersome-ness” rank of the problem associated with the symptom/domain (e.g., a suffix of “_1” is first most bothersome, “_2” is second most bothersome).

¹In the case of the ‘Autonomic Dysfunction’ domain, symptoms are broken up into two prefixes for purposes of data processing, rather than to make a clinical distinction or specifically differentiate these two groups of variables.

The following table lists the clinically meaningful symptoms, their associated domains and variable prefix values appearing in the PD-PROP 2.0 curation:

Domain	Prefix	Symptom
Autonomic Dysfunction	Pdprop2AutDys	Bladder Incontinence
		Bowel Incontinence
		Bowel Urgency
		Excessive Sweating
		Frequent Urination
	Pdprop2AD	Lightheadedness dizziness
		Diarrhea
		Nausea
		Sexual Dysfunction
		Swallowing Problems
		Temperature Dysregulation
		Bloating Feeling Full
		Altered Bowel Frequency
		Abdominal Discomfort Not Otherwise Specified
Bradykinesia	Pdprop2Brady	Slowness

CANNABIS USE (Cann)

Table Description: Cannabis use in PD

View Source Instrument: [\[link\]](#)

Details: This survey instrument is referred to as “Cannabis use in PD” in Fox DEN, the cross-sectional health and disease questionnaires section of the Participant Schedule of Activities, and in the Questionnaire Forms. This survey was administered twice, initially collecting responses from 1/31/2020 through 2/26/2020. Responses were then collected a second time from 2/24/2020 through 06/14/2020 to account for a technical error during initial data collection – no changes were made to the questions themselves. Only participants with PD were invited to complete this survey. 11,596 participants completed this survey. A manuscript detailing findings from the survey can be found here: [\[link\]](#). Questions with free-text responses are not made publicly available to protect participant privacy.

CARE PARTNER EXPERIENCES (CPE)

Table Description: Care Partner Experiences

View Source Instrument: [\[link\]](#)

Details: This one-time survey is referred to as “Care Partner Experiences” in Fox DEN, the cross-sectional health and disease questionnaires section of the Participant Schedule of Activities, and the questionnaire forms. This survey was deployed twice, initially collecting responses from November 2021 through January 2022. Responses were then collected a second time beginning in May 2022, and remains available to participants as of March 2023. Participants who provided a response in the first deployment are also able to provide a second response and no changes were made to the instrument itself. Approximately 2,500 responses have been collected across both administrations as of March 2023. This survey is only completed by participants from the Control cohort.

COVID-19 EXPERIENCE IN THE PD COMMUNITY (COV)

Table Description: COVID-19 Experience in the PD Community

View Source Instrument: [\[link\]](#)

Details: This one-time survey is referred to as “COVID-19 Experience in the PD Community ” in Fox DEN, the cross-sectional health and disease questionnaires section of the Participant Schedule of Activities, and the questionnaire forms. This survey was launched in April 2020 and closed in March 2021. 9,146 participants provided responses for this survey. A manuscript detailing findings from the survey was published in the Journal of Parkinson’s Disease, and can be found here: [\[link\]](#). A revised version of this survey was deployed in Fox Insight in April 2021 with both new questions, as well as overlapping variables (see the subsequent entry, COV2 – “COVID-19 Experiences in the PD Community Part 2 on page 610). This survey was completed by participants from both the PD and Control cohort.

Telemedicine Verification Sub-Study (FIVE)

Table Description: Fox Insight Telemedicine Verification Sub-Study

Details: The data described below was collected as part of the Fox Insight Telemedicine Verification (“FIVE”) sub-study, in collaboration with the University of Rochester. U.S.-based Fox Insight participants were invited to enroll in the sub-study, and 203 participants completed the study. The purpose of this study was to corroborate the accuracy of self-reported PD diagnoses as well as to appraise the reliability of self-reported health data, and to gauge the level of enthusiasm among participants for engaging in video-based research studies.

In addition to video-based visits conducted by research team members at the University of Rochester, participants in this sub-study completed a series of questionnaires primarily pertaining to demographic information, PD symptoms, and PD diagnosis. Participants were divided into five approximately equal cohorts were enrolled; four cohorts with self-reported PD of varying durations diagnosis of varying lengths, and one without PD. During the virtual video-based visits, the investigator reviewed medications, collected a health history, and performed a modified MDS-UPDRS motor examination among other tests. A manuscript detailing findings from the study can be located here: [\[link\]](#).

Mood Disorders and PD (MoDi)

Table Description: Mood Disorders and Parkinson’s Disease

View Source Instrument: [\[link\]](#)

Details: This one-time survey is referred to as “Mood disorders and Parkinson’s disease” in Fox DEN, the cross-sectional health and disease questionnaires section of the Participant Schedule of Activities, and the questionnaire forms. This survey was launched in July 2021 and closed in January 2023. 8,120 participants provided responses to this survey. This survey was completed by participants from both the PD and Control cohorts.

Variable	Data Type	Question Text	Sub Choice-1	Sub Choice-2	Value	Value Description	Notes/Resources
MoDiPDDiag	Numeric	Do you currently have a diagnosis of Parkinson's disease, or parkinsonism, by a physician or other health care professional?			1	Yes	
					2	No	
MoDiBPDdiag	Numeric	Have you ever been diagnosed by a health professional with bipolar disorder, manic depression, or mania?			1	Yes	
					2	No	
					3	Not sure	
					4	Prefer not to answer	
MoDiBPSymp	Numeric	Even if you have not been diagnosed, do you think you may have experienced symptoms of bipolar disorder or mania?			1	Yes	Participants are only presented this question if they didn't answer 'Yes' to the question in Variable 'MoDiBPDdiag'. (MoDiBPDdiag ≠ 1). Participants are skipped to the Medications block of questions if 'Yes' is not selected for this question.

PD MICROBIOME (PDMB)

Table Description: PD Microbiome Survey

View Source Instrument: [\[link\]](#)

Details: This one-time survey is referred to as the “PD Microbiome Survey” in Fox DEN and the Questionnaire Forms. This survey was part of the PD Microbiome sub-study conducted in partnership with 23andMe. The study was conducted in two phases, a pilot study followed by an expanded main study. The pilot study was completed in December 2019 with a smaller group of participants, exclusively from the PD cohort. The goal was to assess the feasibility of collecting stool and saliva samples. Afterwards, the main study was conducted between February 2021 and December 2021 with participants from both the PD and Control cohorts. Survey data collected in conjunction with this sub-study is available to researchers with Tier 1 Fox Insight access, with additional shallow shotgun sequencing reads from stool and saliva samples available to researchers with Tier 2 access. To register for Tier 1 access click [here](#), to register for Tier 2 access click [here](#). Tier 2 data is provided in .FASTQ format. Participants completed this survey after they had provided their samples and was completed by participants from both the PD and Control cohorts.
